Implementation Accomplishments

- Submitted 46,000 ICD-10 claims to insurance carriers
- Close to 1,300 inpatient October discharges paid by insurance carriers
- Coding productivity at 85% of historical averages
- Continued stability of all core NYPH applications and interfaces
- Corrected approximately 8,000 erroneously coded outpatient encounters (@ 5% of total volume)
- Achieved ICDx interaction with 89% of all inpatient encounters
- Minimal to no inflow of ICD-9 codes on October registrations.
- Completed "ICD-10 Rounds" for more than 30 entry points across ACN, Admitting, and Ancillary Service Areas at NYPH.
- Developed and populated ICD-10 AnTENna Website with numerous support documents and guidance resources

^{* -} Figures and estimates as of October 23, 2015

Outstanding Issues & Contingency Procedures

How to Identify Post October 1st Visits w/ ICD-9 Codes

October 30, 2015

How to Identify Post October 1st Visits w/ ICD-9 Codes

Proper coding of all registered patient encounters is essential to ensuring that services provided are billed timely and accurately. All patient encounters with a date of service of Oct. 1st or later must be coded with ICD-10 codes. To identify cases after Oct. 1st that have ICD-9 codes in Eagle, use the EagleView **Outpatient Visit** report.

How to Identify Post October 1st Visits w/ ICD-9 Codes (cont.)

When running the Outpatient Visit file, be sure to select your **Registration area / Clinic ID** and the **Visit date**

Then place a check mark in the 'Exclude Terminated Registrations' and 'Include All Diag Codes' fields

Click on 'Search Data' to run the report

The **Visit History Results** screen will display a view only detailed account listing.

For easy manipulation of the data, export to Excel

Revenue

How to Identify Post October 1st Visits w/ ICD-9 Codes (cont.)

Once in Excel, Diagnosis Codes can be found in the '**DIAG_CODE'** fields, along with an ICD-9 indicator, located directly to the right of each diagnosis cell in the '**DIAG_TYPE'** field.

Review all fields with diagnosis code information to identify the incorrect use of ICD-9 codes.

Cases with both ICD-9 and ICD-10 codes on an account are acceptable; Eagle will send out the appropriate code, you want to look for those cases where only an ICD-9 code is present.

How to use the NYP Code Converter

October 30, 2015

Using NYP Code Converter to Convert Diagnosis Codes

Launch NYP Code Converter

Revenue

Cycle Academy

- The NYP Code Converter is an ICD-10 transition period tool developed by NYP (in collaboration with Columbia University) to assist operating areas and staff to translate ICD-9 codes to equivalent ICD-10 options based on the Centers for Medicare and Medicaid Services (CMS) General Equivalency Mappings (GEMs) crosswalk tables.
- Staff may access the NYP Code Converter through the ICD-10
 AnTENna website

(<u>http://nyplearningcenter.org/apps/eLearning/cms/icd10/</u>) by clicking on the link in the box highlighted in the image to the right.

ICD-10 Project releases operating guidance for transition period code conversion activities

🗄 September 8, 2015 🔒 Jason Gottlieb

Code conversion is defined as an exercise to supply, replace, and/or update ICD-9 diagnosis and/or ICD-9 procedure codes with equivalent ICD-10 codes. Code conversion is a necessary ICD -- to cansition period activity for a multiple of clinical, periodinancial, and financial activities. The updating and/or conversion of ICD-9 codes to ICD-10 codes support the Hospital's ongoing operations with an ICD-10 ready data infrastructure. NPP's ability to define accurate ICD-10 codes supports among other things, medical necessity, financial clearance, patient population selections, pre-registration, and myrial deporting requirements both internally and externally.

The purpose of this guidance document is to provide direction for the situations, circumstances, and vehicles by which and for which it is considered acceptable and appropriate for NP to engage in ICD-9 to ICD-10 code conversion activities. The ICD-10 transition across the continuum of care and multiple provides, vehicles, pagers, and regulatory agencies will present many complexities. As such, it is a practical reality that entities on which NP may demonstrate varying levels of dependence for diagnosis code data and/or definition will span the spectrum of mound II CD-10 readmases. It is caroanable to accume that circuations for which NVP mawine ICD-

Using NYP Code Converter to Convert Diagnosis Codes (cont.)

- 1. Set the translation to, "Between ICD9 and ICD10". This will be the default setting on launch.
- 2. Remove the text in the entry box by clicking and dragging over the selection with your mouse and pressing he DELETE key on your keyboard.
- 3. Type the ICD-9 diagnosis code or diagnosis description into the diagnosis entry box.
 - ICD-9 diagnosis codes may be entered with or without the decimal point.
 - Diagnosis descriptions are ideally entered with as much specificity as known to minimize the number of results. Using body parts, terms such as 'unspecified', and appropriate placement of punctuation will increase the likelihood of useable and valid results.

- 1. Execute the translation by clicking on the "**Translate**" button with your mouse.
- 2. Depending on the ICD-9 code entered, the converter will generate one or more ICD-10 code options for review.
 - Diagnosis code entry will only return results for the specific ICD-9 diagnosis code entered.
 - Diagnosis descriptions may potentially return multiple ICD-9 diagnosis codes and associated ICD-10 diagnosis codes

Using NYP Code Converter to Convert Diagnosis Codes (cont.)

Revenue Cycle Academy

- 1. ICD9 MED Name The description associated with the ICD-9 diagnosis code entered in the diagnosis entry box. Review this description to ensure it aligns with the diagnosis that has been identified with the patient. Should it not, the ICD-9 code entered may be incorrect.
- 2. ICD9 The ICD-9 diagnosis code entered in the diagnosis entry box.
- 3. Match Direction The arrow icons explain the specific relationship between the ICD-9 code and the resulting ICD-10 code options.
 - 9<<->>10: Indicates that the ICD-9 code translates to the identified ICD-10 code and the ICD-10 code translates back to the ICD-9 code (i.e. - 1:1 match)
 - 9<<- - -10: Indicates that the ICD-10 codes generated as a result of the translation are more specific options to the ICD-9 diagnosis code (i.e. - 1:many match)
 - 9--->>10: Indicates that all ICD-10 diagnosis codes are required to translate to the ICD-9 diagnosis code (i.e. Many:1 match).
- 4. ICD10 The ICD-10 diagnosis codes generated as a result of the translation
- ICD10 MED Name The description associated with the ICD-10 diagnosis code(s) generated as a result of the translation. Review this description to ensure it aligns with the diagnosis that has been identified with the patient before assigning it to any element of the patient's encounter.

Using NYP Code Converter to Convert Text

Launch NYP Code Converter

Translations generated as a result of diagnosis description entry may produce multiple ICD-9 codes and associated ICD-10 code options. Generally speaking, the safest way to ensure correct code conversion and subsequent code assignment is to review these options with a clinical professional and/or certified coding professional prior to assigning a code to any aspect of the patient's encounter. The following general guidelines may be applied when attempting to convert a diagnosis description to the appropriate ICD-10 code.

- Apply as much specificity to the description entry as is known based on documentation supplied by the referring and/or treating provider
- Contingent on the specific purpose of the code conversion activity, users may rely on matches in which the match direction field indicates a bi-directional match (9<<- - ->>10) to limit the available options.
- Contingent on the specific purpose of the code conversion activity, users may be able to use a match option in which the ICD10 MED Name description indicates, "unspecified"

Operational Reminder: How to Pull an Open Visit Report using EagleView October 30, 2015

How to Pull an Open Visit Report using EagleView

Daily reconciliation and closing of all registered patient encounters are essential to ensure that services provided will be billed accuratly. A closed encounter must include the name of the attending physician, visit type, discharge date, discharge disposition, discharge time, and diagnosis code(s). If any of these critical elements are missing, the claim cannot be processed. To ensure that all encounters for care are discharged in Eagle, use the EagleView Open Visit report. Accounts that appear on this report need immediate remediation

When running the Open Visits report, leave the Visit Date Range blank on the query screen so that all open visits will appear on the report.

Revenue Cycle Academy

How to Pull an Open Visit Report using EagleView (cont.)

The Open Visits Results screen will provide the count on the Open Visits. The Open Visit Results Details section will list all accounts that are still open. For easy manipulation of the data, export to Excel and filter by visit date.

Revenue

Reminders

- ICD-10 is date of service/date of discharge sensitive.
- DO NOT enter decimal points when entering ICD-10 codes in Eagle
- ICD-10 diagnosis codes are 3 7 characters, alpha-numeric, and ALWAYS begin with a letter
- Remind providers to scroll to the right of their health issue to see ICD10 codes for SuperBill
- Code conversions with multiple options should use the choices with bidirectional arrows
- Remind providers of the documentation assistance tools available to them in SCM (ICDx), EPIC (Diagnosis Calculator), and Crown

Ongoing Support: Code Conversion

- Devices that are generally eligible for code conversion activities typically include:
 - Reports
 - Data extracts
 - Clinical orders and plans of care
 - Referrals and appointments for clinical services
 - Technology application-specific tables, dictionaries, or functionality that is designed to represent or use a specific sub-set of the overall ICD-9 and ICD-10 code set.
 - Forms, documents, and other data capture vehicles that currently include ICD-9 diagnosis codes
- Steps in the code conversion process
 - Presentation of the device and diagnostic element(s) to be converted.
 - Diagnostic elements converted to ICD-10 equivalents.
 - Conversion presented to business/operational/clinical owner for review and approval.
 - Approved conversion presented to technical owner for update or replacement.
 - Device tested (as applicable) with new ICD-10 elements.
 - Device placed into production.
- Caveats, exceptions, and assumptions
 - Code criteria shall be presented in an acceptable format for conversion (e.g. spreadsheet).
 - Business owner and/or ITS point of contact are responsible to validate the efficacy of the deliverable's content prior to submission. Invalid code criteria <u>shall not</u> be converted.
 - Code criteria defined by external agencies <u>shall not</u> be converted by PMO.
 - Device owner is responsible for approving the code conversion prior to re-programming.
 - It is at the IT point of contact's discretion as to how to best update converted devices.
 - Business owner is responsible for the redesign of forms, documents, and other "hard" data capture vehicles for which replacement ICD-10 codes have been provided.

In-Webinar Questions & Answers

Revenue Cycle Academy

Q: Where do we locate the NYP Code Converter?

A: Staff may access the NYP Code Converter through the ICD-10 AnTENna website (<u>http://nyplearningcenter.org/apps/eLearning/cms/icd10/</u>) by clicking on the link in the box labeled "Code Converter," on the homepage.

Q: In Radiology, we are finding that requisitions generated from EPIC still contain both ICD-9 and ICD-10 codes. Should we be entering both in Eagle during our registration to remain compliant with documentation? If so, should the ICD-10 code always be primary?

A: It is okay for there to be dual coding in Eagle. The sequence of ICD-9 & ICD-10 codes does not affect the billing of a claim, as Eagle will only push ICD-10 codes out the door for services dated October 1st & onward.

Q: Are there specific SCM security rights controlling Preferred Mapping?

A: No. There should be an option to enable access to Preferred Mapping in SCM. If your Preferred Mapping icon appears to be disabled, contact the helpdesk (servicedesk@nyp.org) & provide them with a screenshot of your disabled icon.

Q: Are there any codes that are invalid primary diagnosis for Medicare claims?

A: Yes. There are many codes that are considered invalid as primary diagnosis for Medicare. You can use the MediQuant Medical Necessity Checker to verify which codes are valid/invalid to submit on a Medicare claim. This tool can be found on the Infonet, under "Clinical Resources", or at https://mediquantfirstcomply.com/firstcomply5/default.asp. Please note: You might need to request access to this tool.

Q: In Radiology, we are receiving many walk-in Pediatric X-ray patients that have requisitions that contain ICD-10 "S" codes. We know that "S" codes require an accident link but not all parents are willing to provide the specifics of the accident. How important is the accuracy of the accident link?

A: Accuracy of the accident record link is preferred, however, if unable to obtain the accident information, use the date and time of the ED visit relating to the accident case.

NewYork-Presbyterian

On behalf of NYP & the ICD-10 Support Center Team, we would like to thank everyone who participated in this major organizational transition. Keep up the good work!

We Came, We Saw, We Conquered, I-10!
